- Persian (Native)
- Azerbaijani (Native)
- English (Intermediate)

ABOUT MYSELF

Front-end developer and Computer Engineering student with hands-on experience converting Figma designs into production-ready web apps and building full-stack features end-to-end. Comfortable owning UI implementation, API integration, and data-driven interfaces across Vue/Nuxt and React ecosystems. Currently focused on writing clean, typed, maintainable front-end code and integrating effectively with the backend systems it connects to.

EXPERIENCE

Vaultly — Personal Finance Tracker [Repository link](#) [Live demo](#)

Nuxt 4 · TypeScript · Tailwind CSS · Supabase · Pinia · Vuelidate · Nuxt UI · Nuxt Chart

- Built a full-stack finance tracker with wallets, transactions, budgets, and category management, enforcing per-user data isolation with Postgres Row-Level Security.
- Designed a normalized relational schema with foreign-key-based category relationships, migrating from denormalized text fields to typed, joinable structures.
- Structured app state with Pinia using a consistent store pattern — actions throw on error, components own loading/error state — across all data flows.

Raceroms — ECU Tuning Company Website [Raceroms website](#)

Nuxt 3 · TailwindCSS · TypeScript · Shadcn · Axios

- Translated Figma designs into responsive, production-ready pages in collaboration with the UI/UX designer.
- Handled data fetching and integration with backend APIs using Axios, including form submissions and validation.
- Improved on-page SEO to support organic visibility for the company's service pages.

EDUCATION

Bachelor of Computer Engineering
Islamic Azad University of Tabriz
2024 – 2028 (Expected)
